SUMMER LANDSCAPING CHECKLIST

WWW.SCHILLLANDSCAPING.COM

WATER WISELY

Try watering early in the day to increase absorption. Watering more heavily and less frequently will help avoid pests and disease from ravaging your plants.

PRUNE

Summer pruning your trees and shrubs is great for maintaining plant size as well as preventing the spread of disease by removing damaged material.

MONITOR TURF

Keep an eye out for brown, reddish, or yellow patches that are signs of common turf diseases and combat them with fungicide or fertilizer.

ALTER MOWING

Mow less frequently during extreme moisture or dryness. Raise your mower's deck height to about 4" and alter your mowing pattern to minimize turf stress.

WATCH FOR BUGS

Summer is bug season & pests like chinch bugs are rampant. Get help if your turf is spongy, has brown patches, or is host to 10+ grubs per square foot.

SEED OR SOD

Consider re-seeding or laying sod in late summer. Sod allows for instant gratification but needs more watering. Seed is less expensive and less prone to disease.
